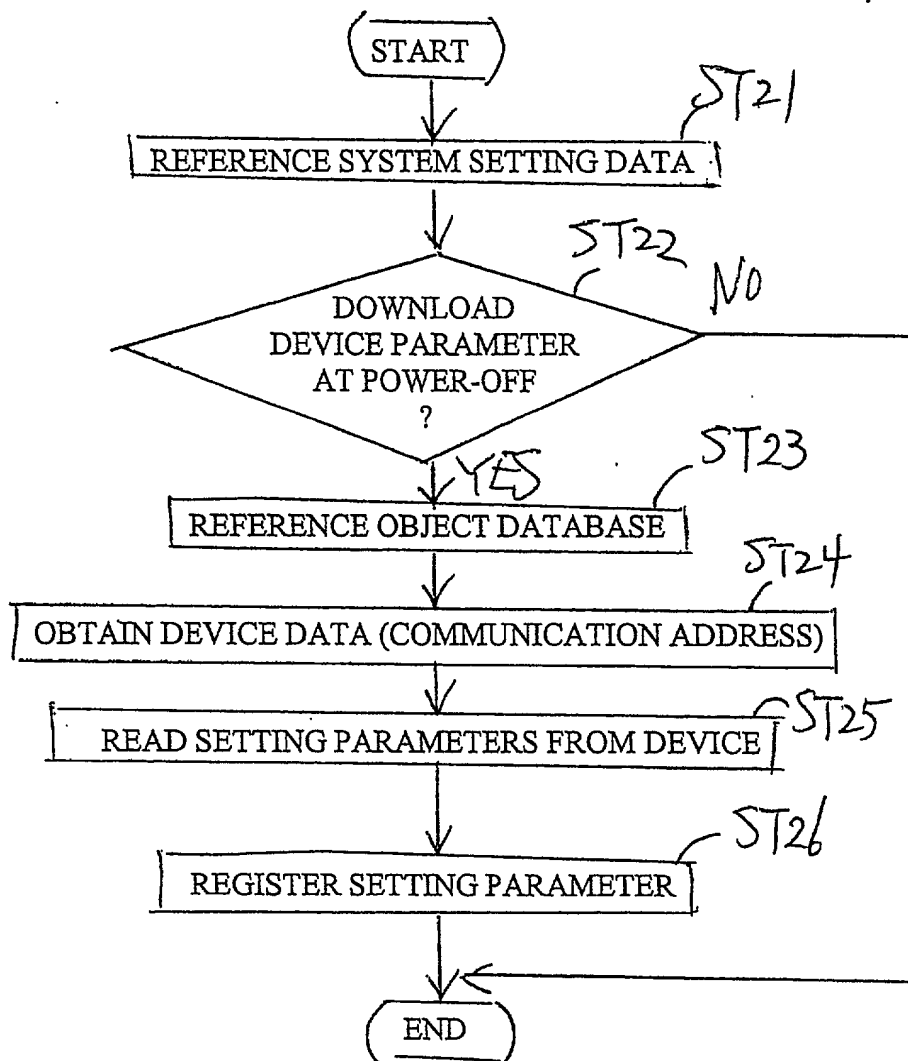

Fig. 21

FIG. 22 is a block diagram of a controller 14c according to one embodiment of the present invention. The controller 14c includes a device monitoring unit 14d, a controller memory 14e, and a plurality of devices 30. The device monitoring unit 14d is connected to the controller memory 14e and the devices 30. The controller memory 14e stores device status data for each device 30. The device monitoring unit 14d monitors the status of each device 30 and stores the status data in the controller memory 14e. The devices 30 are connected to the controller 14c via a bus. Each device 30 includes a device address (e.g., ADDRESS 1, ADDRESS 2, ADDRESS 3, ADDRESS n).
